

Sooty Tern N. Monomoy I., MA June 21, 1985 Photo by Robert C. Humphrey

# Field Records June 1985

by George W. Gove, Robert H. Stymeist, Lee E. Taylor

June 1985 was cooler and cloudier than usual with only slightly more than the normal amount of rain despite rainfall on seven consecutive days. The average temperature was 64.8°, 3.2° below normal, tie for the seventeenth-coolest June in 115 years of record. The month's high was but 84° on June 6 and 7. The mercury reached only 58° on June 29, setting a new low record maximum for that date; the previous record was 60° set in 1888. Rainfall totaled 3.92 inches, one inch more than last June, making it the first month since last October to have higher than normal rainfall. Thunderstorms occurred on five days, one more than average.

### LOONS THROUGH HERONS

During a northeasterly storm in late June, several pelagic species were seen from coastal locations, notably Sandy Neck in Barnstable and Race Point in Provincetown. At Sandy Neck three Manx Shearwaters, twenty Northern Gannets as well as 50 Leach's Storm-Petrels were seen. At Provincetown six Manx Shearwaters and as many as twenty Sooty Shearwaters were seen, and at least ten Leach's Storm-Petrels were counted. More surprising were three Long-tailed Jaegers, a Sabine's Gull, and a Caspian Tern. An adult Great Cormorant was found in Osterville. Last year the first record of breeding in Massachusetts for Great Cormorant was documented in nearby Buzzards Bay.

Heron reports were ho-hum with the most interesting being at least ten different Yellow-crowned Night Herons reported from seven locations. R.H.S.

## WATERFOWL THROUGH WILD TURKEY

Lingering Brant were found in Plymouth and on Monomoy early in the month. The <u>Garganey</u>, first found on May 11, was still present at Plum Island on June 24. The plumage had changed somehwat from the first sightings, according to P. W. Smith who had seen the bird in May, the "head was still ruddy-colored with very indistinct white area behind eye (June 8). On June 15 the ruddy head color was gone, the stripe in face was more prominent and the bird was nearly in full eclipse plumage but had retained display feathers on scapulars. In flight, white-bordered green speculum very prominent. Forward part of mid-wing gray, not blue as in Blue-winged Teal." Other observers commented on the increased amount of white in the face.

Other interesting reports included a well-described immature male King Eider off Provincetown on June 28. There are few summer records for this species. There were several reports of many young Wood Ducks, especially at Great Meadows, and three fledged Hooded Mergansers were found at Oxbow National Wildlife Refuge.

At least three immature Bald Eagles were present on outer Cape Cod and on the islands most of the month. All three were seen together at Monomoy on June 21, and another (or same) immature eagle was observed feeding on a dead gull on Nantucket. A nearly adult-plumaged Golden Eagle was found at West Tisbury, and an immature was reported from Nantucket.

Other raptor highlights included three nests of Northern Harrier located on South Monomoy. Five adult Red-shouldered Hawks were reported in Eastham, and a nest of this species with two young was found in Medfield. A territorial Northern Goshawk was located in Carlisle, and another pair continued in Norfolk.

A female Wild Turkey was found in Middleboro. This is near the site where the Massachusetts Division of Fisheries and Wildlife have released some birds in hopes that they will again establish themselves; after all, it is Plymouth! R.H.S.

## RAILS THROUGH TERNS

Six Virginia Rail chicks were noted on Plum Island. An alternate-plumaged Lesser Golden-Plover was seen on North Monomoy for two days, June 10 and 11. Young Piping Plover were noted at two locations and included a nest with three eggs at Duxbury Beach. Willets are increasing in number of birds and in number of locations where they are seen. Upland Sandpipers seem to be doing well at military airports with nine to eleven at Hanscom and ten or so pair at Otis Air Force Base. The occurrence at twenty-five White-rumped Sandpipers is a high count for June. There are only three other June reports of Pectoral Sandpipers. The Ruff at Plymouth Beach continued into this month, and the one on Martha's Vineyard was, for that location, the first record a breeding-plumaged Ruff, the only June record for that species, and the first recorded Ruff in over 25 years there.

A number of pelagic species were reported around the time of the nor'easter on June 27 and included Long-tailed, Pomarine, and Parasitic jaegers, Sabine's Gull, and Caspian and Royal terns. An adult Franklin's Gull, in breeding plumage, was seen on the beach at Plum Island (PRNWR), standing in a group of Ring-billed Gulls. The gull was seen for two days there immediately after the storm. One or two Gull-billed Terns spent a week at Plum Island and were seen by many. As many as 400 Arctic Terns were seen at North Monomoy on June 2 with half of these being "portlandica" birds (see BOEM 8:91, June 1980, for a discussion of the portlandica designation). This is an almost unprecedented number of adult Arctic Terns and they were probably blown in from their northward migration route by a storm. A Sooty Tern was photographed at North Monomoy

on June 21. A Black Skimmer nest with three eggs was found on New Island, Orleans, and up to six Black Skimmer were present on Monomoy although there was no evidence of nesting there.

## CUCKOO THROUGH WOODPECKER

Both Black-billed and Yellow-billed cuckoos were reported from various locations but in less than normal numbers, especially Yellow-billed. At least eight Barred Owls were noted on June 12 and up to eleven Short-eared Owls were counted on Monomoy. Two Northern Saw-whet Owls were heard calling in Lakeville. Small numbers of Common Night-hawks were noted throughout the month. Red-bellied Woodpeckers were found in Plymouth and in Millis.

## FLYCATCHERS THROUGH WARBLERS

Migration took its normal course, continuing into the first week of June, especially among the flycatchers and Oporornis warblers. Very late migrants or non-breeding wanderers included two other warblers on the twenty-third: a male Bay-breasted Warbler at Watertown and a male Blackpoll Warbler at Plum Island. The former report is the only one beyond June 6 in the last seven years. The latter record, though notably late, is consistent with reports of single Blackpoll individuals from coastal sites during the last week of June for three of the last five years.

Results of two breeding bird censuses were provided this year: one conducted along the Charles River in Watertown on June 13-15 by Maurice Hall and the other organized by the South Shore Bird Club at Rocky Gutter in South Middleboro on the fifteenth. Hall's efforts produced the late Bay-breasted Warbler and several other careful counts which are included in the tabulation. The Rocky Gutter data included several interesting, large counts, including 47 Black-and-white Warblers and 131 Ovenbirds. These warbler numbers are comparable to those logged by Brian Cassie during his Millis census in 1983, though his data was by one person, in a whole town, over the complete month. The 27 Hermit Thrushes at Rocky Gutter constituted the second highest single-day June count in the last seven years, exceeding only by 30 individuals in 1979. The 57 Veerys there was a seven-year high, distantly approached by a report of 39 in one day in 1980.

Eastern Bluebirds were noted on territory in small numbers at several sites, including the traditional Tyngsboro area, Miles Standish State Forest in Plymouth, and the eastern past of the Quabbin Reservation in Petersham. The five Golden-crowned Kinglets in Wareham is suggestive of another breeding location in eastern Massachusetts

More unusual species reported included a raven both seen and heard several times in Annisquam, and Jackdaw continuing on Nantucket, a Prothonotary Warbler at Lakeville, and a Cerulean Warbler on Martha's Vineyard. Prothonotaries seem to be more common during breeding season in Massachusetts, with reports in three of the last five years,

including two individuals in 1984. The Cerulean Warbler report is the only one for June in the eastern Massachusetts records during the last seven years, and constitutes the first known June record for Martha's Vineyard.

### TANAGERS THROUGH GOLDFINCH

A female Summer Tanager was well observed deep in a maple swamp in Middleboro on June 15. The observer who was able to watch this bird from a distance of twenty feet noted "large pinkish bill, the uniform yellow-olive color and the absence of dusky wings." Possibly the bird was an unmated wanderer that simply lingered after the spring migration was over.

At Hanscom Air Force Base in the Bedford-Lincoln area a count of 193 Savannah Sparrows was reported on June 30. Both adults and some recently fledged young were tallied during an early morning survey of the grassy areas between the runways of the facility. Also three singing Grasshopper Sparrows were located as well as a female bird flushed from a nest containing two eggs. At the Crane Wildlife Area in Falmouth six Grasshopper Sparrows were located. Seaside Sparrows were reported from three locations with a maximum of five individuals noted from Plum Island.

At Hanscom Air Force Base about one hundred Eastern Meadowlarks (both adults and fledged young) were tallied on June 30. Orchard Orioles were reported from eight locations, and as many as eighteen Northern Orioles were found along the Charles River in Watertown.

Fourteen Red Crossbills at Gate 40 in East Quabbin was a very interesting report and suggests that possible nesting occurred. A Pine Siskin was noted in West Barnstable on June 21.

# **BIRD OBSERVER NEEDS TYPISTS**

BIRD OBSERVER NEEDS TYPISTS to produce camera-ready copy for this journal. (Such typing must be done on an IBM Correcting Selectric 12-pitch type-writer; so if you own or have access to such a machine, that would be a distinct plus.) If you are a GOOD OR EXPERT TYPIST - with or without a typewriter - and would like to join the BIRD OBSERVER staff, please call the editor at 641-2205 (anytime).
