

FIELD OBSERVATIONS

Winter report: December 2003-February 2004.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers are found at the end of this report. We greatly prefer observations sent via e-mail.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio tapes, or specimens) are called “records.” Species for which documentation is required by the FOS Records Committee (FOSRC; Bowman 2000, *Fla. Field Nat.* 28:149-160) are marked here with an asterisk (*). A county designation (*in italics*) accompanies the first-time listing of each site in this report. Abbreviations in this report are: CA = conservation area, EOS = end of season, NP = national park, NWR = national wildlife refuge, RA = restoration area, SP = state park, STF = sewage treatment facility, and N, S, E, W etc., for compass directions. Bold-faced species denote birds newly reported or verified in Florida, or record counts.

SUMMARY OF THE WINTER SEASON

The season was relatively uneventful birdwise, with relatively few reports of American Robins and Cedar Waxwings. No new native species were documented, although Florida's first Gray Heron was reported at Lake Apopka. A Green-rumped Parrotlet at Key West provided another new exotic to the state's list. As is now expected, western-breeding hummingbirds were found this winter, primarily in the Panhandle. Fred Basset of the Hummingbird Study Group banded 87 hummingbirds of seven species: 50 Rufous, 15 Ruby-throated, 11 Black-chinned, 5 Buff-bellied, 3 Calliope, 2 Allen's, and one Broad-tailed. Eight other hummingbirds banded during previous winters were recaptured at the same feeders, and Rufous Hummingbirds banded previously at Tallahassee were recaptured by others in Georgia and Tennessee.

In addition to the Gray Heron, FOSRC rarities reported with documentation were the Common Merganser at Jacksonville; Iceland Gull at Port Canaveral; Calliope, Broad-tailed, and Allen's hummingbirds in the Panhandle; one Tropical and two Cassin's kingbirds at Lake Apopka; MacGillivray's Warbler at Davie; Red-legged Honeycreepers at Cape Florida and Everglades National Park; and Harris's Sparrow in Hendry County.
