

FIELD OBSERVATIONS

Spring report: March-May 2005.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers are found at the end of this report. We greatly prefer observations sent via e-mail.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio tapes, or specimens) are called “records.” Species for which documentation is required by the FOS Records Committee (FOSRC; Bowman 2004, *Fla. Field Nat.* 32: 7-33) are marked here with an asterisk (*). A county designation (*in italics*) accompanies the first-time listing of each site in this report. Abbreviations in this report are: CA = conservation area, CP = county park, EOS = end of season, NP = national park, NSRA = north shore restoration area, NWR = national wildlife refuge, RA = restoration area, SP = state park, SRA = state recreation area, STF = sewage treatment facility, and N, S, E, W etc., for compass directions. Bold-faced species denote birds newly reported or verified in Florida, or record counts.

SUMMARY OF THE SPRING SEASON

It was a good season for vagrants, with 11 FOSRC rarities reported: (Eurasian) Green-winged Teal at Gainesville, Masked Duck at Viera, Northern Fulmar at Satellite Beach (first Florida record), White-faced Ibis at St. Marks NWR, Surfbird at Smyrna Dunes Park, Heermann's Gull at St. George Island, Razorbill at Dunedin, Thick-billed Vireo at Hollywood, Kirtland's Warbler at Fort De Soto Park, and Red-legged Honeycreeper at Key West. A notable movement of Mexican Cave Swallows was noted throughout the peninsula 12-20 March. Murray Gardler noted a fallout at the Dry Tortugas on 27 Apr, with 25 species of warblers. Finally, we thank Linda Cooper for her 16 years of service to the FOS Field Observations Committee; we welcome Paul Miller <Paul.Miller@dep.state.fl.us> as the new compiler for the area that includes Highlands, Okeechobee, and Polk counties.
