

FIELD OBSERVATIONS

Summer Report: June-July 2011.—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <www.fosbirds.org/RecordsCommittee/OfficialStateList.aspx>) are marked here with an asterisk (*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, CWA = Critical Wildlife Area, EOS = end of season, NERR = National Estuarine Research Reserve, nm = nautical miles, NP = National Park, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. Starting with this report, BPA catalog numbers are provided for all photographs or video- or audio-recordings archived by the Field Observations Committee.

SUMMARY OF THE SUMMER SEASON

The weather this season was uneventful. FOSRC rarities reported were the Tropical Kingbird in Hillsborough County and Yellow-green Vireo at Pensacola Beach. Rare exotics included Florida’s first Blue Waxbill that continued at Tallahassee, the state’s first record of Alexandrine Parakeet at St. Petersburg, and the first report and record of a rosella in Florida, a Crimson Rosella × Eastern Rosella hybrid in Manatee County.

Summer 2004 corrigendum: In archiving photographs for the BPA, I discovered some discrepancies in the photographs of two of three Chipping Sparrows reportedly observed at Avon Park (*Highlands*) “for most of Jun” 2004 (Anne Bellenger). The photographs, which show a juvenile and a basic-plumaged adult, were posted to the photographer’s webpage, which states that they were taken in 2002 (probably not during summer, based on the plumages of the birds). Thus this report should be stricken.
