

## FIELD OBSERVATIONS

**Summer Report: June-July 2012.**—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <[www.fosbirds.org/official-florida-state-bird-list](http://www.fosbirds.org/official-florida-state-bird-list)>) are marked here with an asterisk (\*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, CWA = Critical Wildlife Area, EOS = end of season, FLMNH = Florida Museum of Natural History, NERR = National Estuarine Research Reserve, NF = National Forest, nm = nautical miles, NP = National Park, NS = National Seashore, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WEA = Wildlife and Environmental Area, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+); BPA catalog numbers are provided for the most significant of these.

### SUMMARY OF THE SUMMER SEASON

It was a rather uneventful season. A notable exception was Tropical Storm *Debby*, which formed in the Gulf of Mexico on 23 June and made landfall near Steinhatchee three days later. The storm brought torrential rain to most of the state, with some areas recording 20 inches (50 cm) of rain. Many Least Tern and Black Skimmer colonies along the Gulf coast were washed over by *Debby*. Few rarities were reported; a Cuban Grassquit at Coral Gables was presumed to be an escapee.

This report is dedicated to the memory of Chuck Geanangel of Winter Haven, long-time member of the Florida birding community, who died 9 November 2012.
