

## FIELD OBSERVATIONS

**Spring Report: March-May 2014.**—This report consists of significant bird observations compiled by the Field Observations Committee (FOC). Electronic submissions to the FOC should be in the following format: species, number of individuals, age and sex of the bird(s), color morph if applicable, location (including county), date, observer(s), and significance. Seasons are winter (December-February), spring (March-May), summer (June-July), and fall (August-November). Submit observations to regional compilers within two weeks after the close of each season, or to the state compiler within one month. Addresses of the compilers follow this report.

Sight-only observations are considered “reports” while only those observations supported by verifiable evidence (photographs, video or audio recordings, or specimens) are called “records.” Species for which documentation is required by the FOC and by the FOS Records Committee (FOSRC; <fosbirds.org/official-florida-state-bird-list>) are marked here with an asterisk (\*). A county designation (in italics) accompanies the first-time listing of each site in this report. Abbreviations in this report are: AFB = Air Force Base, AFR = Air Force Range, EOS = end of season, NERR = National Estuarine Research Reserve, NF = National Forest, nm = nautical miles, NP = National Park, NSRA = North Shore Restoration Area, NWR = National Wildlife Refuge, SF = State Forest, SP = State Park, STA = Stormwater Treatment Area, STF = sewage treatment facility, WMA = Wildlife Management Area, and N, S, E, W etc., for compass directions. Bold-faced entries denote birds newly reported or verified in Florida, or record numbers. Photographs or video- or audio-recordings archived by the FOC are identified by a plus (+).

### SUMMARY OF THE SPRING SEASON

There were no significant weather events this season, although a large fallout of Neotropical migrants was noted at Cedar Key 16-17 April. Along the Gulf coast, a large movement of Lincoln’s Sparrows was noted in late April including six at Seahorse Key. A record high count of 147 American Flamingos—unprecedented in 100 years if wild birds—was observed at STA-2 in Palm Beach County. Six Bahama Mockingbirds were found in southern Florida including the second Gulf coast record at Leffis Key. Other FOSRC rarities include: White-cheeked Pintail at Pelican Island NWR, breeding Neotropical Cormorants in Palm Beach County, Bar-tailed Godwit in Pinellas County, California Gulls at Daytona Beach Shores and Fort Pickens, a South Polar Skua at Deerfield Beach, Calliope Hummingbird at High Springs, four Cassin’s Kingbirds in the peninsula, a male MacGillivray’s Warbler at Riverbend Park, and a male Bullock’s Oriole at Gainesville.

Finally, we thank John Boyd for his fifteen years of service as regional compiler for southeastern Florida.
