

students and at least eight LLCC classes) any time during the season. Thanks, too, to everyone who provided financial support, especially to The Rotary Club of Springfield South for another grant, the Redmans for unique grants and several anonymous donors.

MO--WORLD BIRD SANCTUARY 382-0903

Valley Park, St. Louis County, MO

Coordinator/Bander: Linda C. Tossing

Assistants: Valerie Geile, Samantha Matchefts

Address: 125 Bald Eagle Ridge Road,
Valley Park, MO 63088

Email addr: birdbanding@worldbirdsantuary.org

The study area for the Migration Blitz is approximately 16.1ha of the 125.4ha World Bird Sanctuary. This is an oak hickory forested dry creek north-east facing ravine in an undeveloped area of the sanctuary in the Meramec River Valley (part of the Meramec Valley Important Bird Area). The results are a 5 year extension of the 10 year study started in 2009, focusing on the use of migrants of the ravine. For 2019, we had 58 different species. We continue to have a volume of Tennessee and Nashville warblers and Swainson's and Gray-cheeked thrushes. This year we also had two Wood Thrush returns. The cooler weather in April seemed to impact the migration thru St. Louis and we did not experience the volume of birds until the beginning of May.

**TN--WARNER PARK 363-0865
NATURE CENTER (WPNC)**

Nashville, Davidson County, TN

Coordinators/Banders: Sandy Bivens*, Kathy Shaw and Laura Cook

Chief assistants: Ethel Kawamura, John Kell, Diana McLusky, Susan Bradfield, Leah LaRocco and Patti Ghertner.

*Address: 7311 Hwy 100,
Nashville, TN 37221

Warner Park Banding Station is in its 38th year of operation. The weather cooperated nicely, and we were able to hold all six of our scheduled sessions. While our first banding session of the year netted

the most birds, a quarter of the birds caught were White-throated Sparrows, a winter resident in our area. By our last session at the end of April, we had fewer captures but our highest diversity of species. On that day, 30 Apr, we recaptured an ASY male Kentucky Warbler that we had previously caught, on the same day, in 2016. Since then, we have captured him every spring between March and June. Warner Park Banding Station is open for observation to the public and during this spring banding season, we engaged 1,276 park visitors in bird related research and programs.

In addition to our historical spring migration banding, the WPNC Banding Station engaged in several other research programs including the first Mobile Spring Migration Banding. This new spring migration project will compare species numbers and composition at a less public, more interior park location with our traditional banding station at Warner Park. During five banding sessions 39 birds of 16 species were captured along with three recaptures. A highlight included the capture of three thrush species: Wood, Swainson's, and Gray-cheeked.

Warner Park Banding Station is grateful to the dedicated team of volunteers and staff who contribute hundreds of hours at the station, bird counts, and educational programs. A special thank you to Friends of Warner Parks and the staff of Warner Park Nature Center and Metro Nashville Parks and Recreation for their continued support.

**TN--GREENWAY FARMS 375-0851
BANDING STATION**

Hixson, Hamilton County, TN

Station Compiler: David Aborn
