APPENDIX	76

TABLES

Table 1.	Behavioral categories used in quantifying daily activity patterns and energy expenditure of Black-billed Magpies	8
Table 2.	Categories and conversions used in estimating daily energy expenditure of Black-billed Magpies	9
Table 3.	Seasonal and daily variation observed in six meteorological variables	15
Table 4.	Body weight, body dimensions, total surface area, and ratio of body diameter to body length of female and male Black-billed Magpies	18
Table 5.	Absorptivity of Black-billed Magpie plumage to shortwave radiation	19
Table 6.	A_b/A_t ratios for bodies and heads of female and male Black-billed Magpies	20
Table 7.	Relationship of T_c of Black-billed Magpies to T_a in response to clear or cloudy skies ..	24
Table 8.	Phenological events, months, and dates of behavioral observation of Black-billed Magpies together with average length of active periods, hours of visual contact, and percent of the active period in visual contact for each composite day	30
Table 9.	Daily time budget of Black-billed Magpies during nonreproductive months	31
Table 10.	Daily time budget of Black-billed Magpies during various reproductive stages	32
Table 11.	Daily energy expenditure of Black-billed Magpies during nonreproductive months ..	36
Table 12.	Daily energy expenditure of Black-billed Magpies during various reproductive stages ..	37
Table 13.	Estimated number of hours per composite day during which Black-billed Magpies had a thermoregulatory requirement	41
Table 14.	Maximum and minimum energy costs possible for Black-billed Magpies during each Bout, and actual calculated costs of the Bouts during the annual cycle expressed as a multiple of H_b	44
Table 15.	Consequences of variation in intra- and interbout activity on metabolic costs of activity of Black-billed Magpies	45
Table 16.	Metabolic rates predicted for six Black-billed Magpie nestlings at about day 21 of the nestling stage	51
Table 17.	Distribution, abundance, and size of Black-billed Magpie food items in relation to behavioral characteristics used in exploiting them	56
Table 18.	Selected H_{TD} values	62
Table A-1.	Mean value, sample size, and standard deviation of the hourly metabolic cost of activity of Black-billed Magpies for periods of visual contact during each composite day ..	76
Table A-2.	Paired <i>t</i> -tests between composite days of the hourly metabolic cost of activity of Black-billed Magpies	77

FIGURES

Figure 1.	Air temperature, and windspeed profiles for selected months	16
Figure 2.	Percentage of days each month (June 1973–June 1974) having cloudy, partly cloudy, and clear skies	17
Figure 3.	Range of effect of different orientations to sun and wind on T_c of the Black-billed Magpies	21
Figure 4.	Equivalent blackbody and ambient air temperatures for Black-billed Magpies as a function of time during a composite day in July	22
Figure 5.	Equivalent blackbody and ambient air temperatures for Black-billed Magpies as a function of time during a composite day in January	23
Figure 6.	Summary of thermal steps available to Black-billed Magpies, and variables used in calculating T_c and \dot{H}_m for magpies	25
Figure 7.	A. Effect of windspeed on metabolic requirements of Black-billed Magpies at various air temperatures. B. Boundary-layer resistance for Black-billed Magpies as a function of windspeed	26
Figure 8.	Annual cycle of Black-billed Magpies	28
Figure 9.	Diurnal activity pattern of Black-billed Magpies for composite days of each reproductive stage and nonreproductive month	33
Figure 10.	Change by months in the ratio of hourly metabolic cost of activity to hourly cost of basal metabolism of Black-billed Magpies	34
Figure 11.	Ratio of total daily energy expenditure to daily basal metabolic requirement of Black-billed Magpies for composite days of each reproductive stage and nonreproductive month	38
Figure 12.	Variation by month in thermoregulatory requirements of Black-billed Magpies ...	40
Figure 13.	A. Required foraging efficiency of Black-billed Magpies during each composite day. B. Required foraging efficiency of Black-billed Magpies as a function of time spent foraging, and H_{TD} of each composite day	46
Figure 14.	Cumulative energy expenditure for Black-billed Magpies during various reproductive stages as a function of days during which these expenditures were incurred ..	52
