

one of which I secured. Several others were seen at about the same time and place by Mr. W. M. Small of Highland Light. The specimen taken is in first plumage, though fully grown and evidently old enough to have come from some distance.—G. S. MILLER, JR., *Cambridge Mass.*

Uncommon Birds for Nantucket Island, Massachusetts.—*Ardea egretta*, AMERICAN EGRET.—On September 20, 1890, while shooting at the eastern end of this island, I saw in the distance a large white heron-like bird, which I thought might be *Ardea occidentalis*, but unfortunately I failed to secure it. The following day it was again seen, near the same locality. On September 23, 1890, this bird was shot, and I saw it; it proved to be *Ardea egretta*, and was without any plumes. This is the first record of one being taken on this island.

Mimus polyglottos. MOCKING BIRD.—On November 20, 1890, while driving on the western part of the island, and passing near a large swamp, close to which was an unoccupied farmhouse, I saw a Mocking-bird running along the ridge pole of one of the small buildings. On getting out of my wagon to secure it, the bird flew into the middle of the swamp and perched on the top of a bush in full sight. Although a very difficult matter, owing to the water, I determined to go in after it. I had just started, when the bird flew towards me and alighted on a fence post, from which I shot it. This is the *third* instance of my shooting this bird here, besides seeing another flitting among the houses in the town on August 11, 1889. These birds were all full-grown, and probably migrants, as I have never heard of their breeding on the island. They have never before to my knowledge been noted here.

Crymophilus fulicarius. RED PHALAROPE.—On October 25, 1890, a Red Phalarope (in the gray plumage) was shot near the 'No Bottom Pond,' on the outskirts of the town. Only one was seen. This is the first time to my knowledge that *C. fulicarius* has been taken here. I have in the past taken *P. lobatus* (September 20, 1870) and *P. tricolor* (August 31, 1889) on the island.—GEORGE H. MACKAY, *Nantucket, Mass.*

NOTES AND NEWS.

Dr. FERDINAND KRAUSS, of Stuttgart, Germany, an Honorary Member of the American Ornithologists' Union, died Sept. 15, 1890, at the age of 78 years. He was director of the Natural History Museum of Stuttgart, and had special charge of the departments of Botany and Zoölogy. His scientific papers cover a wide field, mammals and mollusks especially, as well as birds, coming within the scope of his work.
