

Cathartes aura. — During the latter part of June, 1892, while spending a few days at North Truro, I was told that a Portuguese family in the village had a living 'Bald Eagle' which they had caught slightly wounded. My informant assured me that the bird must be a Bald Eagle, for he had seen it and had noticed particularly that it had no feathers on its head. On looking into the matter I found, as I expected, a Turkey Buzzard. The bird had been caught near the boundary line between North Truro and Provincetown about June 20, but refused all food and died the night before my visit (June 26). It proved to be an adult male in good plumage, but had evidently received a charge of No. 8 shot, nearly a dozen of which were lodged in various parts of the body. — GERRIT S. MILLER, JR., Cambridge, Mass.

Notes on a Few Birds from Northern Ohio. — These notes are presented as being supplementary in some degree to Dr. Wheaton's admirable report in Vol. IV of the Ohio State Geological Survey, to which the reader is referred for the previous history of these birds in this region.

Glaucionetta islandica. — An adult female was brought to me by Mr. Warden of Lorain, Ohio, March 30, 1892.

Clangula hyemalis. — In December, 1891, a large flock of these Ducks stayed for a time near Lorain, and numbers were entangled and drowned in the gill-nets that are set in about fifty-four feet of water. One fish-boat brought in twenty-seven taken in this way in one day.

Oidemia deglandi. — Three, two males and a female, were brought to me May 11, 1892, that had been taken in Mr. Warden's gill-nets near Lorain.

Ardea cœrulea. — There is a fine specimen of this bird in spring plumage in Mr. Jump's collection, that was taken near Oberlin about ten years ago.

Tringa canutus. — I have two records of this 'maritime' species, one based on a head that I picked up on the shore of Lake Erie in October, 1890, the other on a bird killed by Mr. Harry Warden, of Lorain, and presented to Oberlin College, Sept., 1891.

Tringa bairdii. — I took several specimens Aug. 30, 1890, near Lorain, and have seen them at other times. I do not think it can be classed as 'rare.'

Loxia leucoptera. — Prof. J. T. Shaw identified as this species a bird that his cat brought in on April 10, 1892. The specimen was thoroughly examined, but unfortunately was not preserved.

Chondestes grammacus. — I noticed this bird for the first time this year (1892), when I found two pairs building nests near Oberlin.

Helminthophila celata. — Mr. G. D. Wilder took a specimen of this western species near Oberlin May 11, 1892.

Dendroica palmarum hypochrysea. — Mr. G. D. Wilder took a well-marked specimen April 16, 1892, near Oberlin. This is, Mr. Ridgway tells me, the first record for west of the Alleghanies. — L. M. McCORMICK, Oberlin, Ohio.
