

what wabbly. However, it was otherwise active, and beat its wings strongly when I took it out of the basket where I had kept it all night. There was a little weakness in the first part of its flight when I liberated it from a second story window, but it had soon steadied itself, and flying through the rain towards the Mississippi, was shortly out of sight. — H. KOPMAN, *New Orleans, La.*

A Correction. — In my note on 'The Turkey Buzzard in Maine' (Auk, XXII, p. 78.) I stated that the present record made the tenth for the State. I included two specimens which Mr. Boardman added to a revised list which he sent me in 1873. Mr. Ora W. Knight has called my attention to the fact that the title of Mr. Boardman's list 'Catalogue of the Birds found in the vicinity of Calais, Maine,' admits a number of records for the *vicinity* but over the State line, and that Mr. Boardman had informed him by letter that the two buzzards in question were records for New Brunswick. This fact reduces the legitimate number for the State to eight. — RUTHVEN DEANE, *Chicago, Ill.*

The Crab Hawk (*Urubitinga*) in the Island of St. Lucia, West Indies. — On August 2, 1903, I observed and identified an example of *Urubitinga anthracina* (Licht.) near the town of Soufrière, St. Lucia, British West Indies. There are, I believe, no other records for the island, although the bird very possibly is resident in the highlands of St. Lucia, as it is on the neighboring island of St. Vincent, as St. Lucia is comparatively little known ornithologically. On the other hand, the bird may have strayed from St. Vincent during the late eruptions, as did great numbers of Ramier (*Columba squamosa* Bonn.) which at that time visited the island of Grenada. — AUSTIN H. CLARK, *Boston, Mass.*

Scott's Sparrow in Colorado. — While engaged in field work for the Biological Survey in the fall of 1903, I collected an immature male Scott's Sparrow (*Aimophila ruficeps scottii*) at Trinidad, Colorado — the first record for the State. It was taken September 17, 1903, on a piñon ridge near the city, and was evidently migrating southward at the time. — ARTHUR H. HOWELL, *Washington, D. C.*

Nelson's Sparrow in Nebraska. — On the 8th of October last I collected the first specimen of Nelson Sparrow (*Ammodramus nelsoni*) in this State. It was a young male and was a member of a flock of about a dozen birds mingled with great numbers of Leconte and Grasshopper Sparrows, in a marsh surrounding a pond northeast of this city. The birds were shy, only occasionally mounting to a weed-stalk or grass-stem for a moment to take a look at the intruder; and no note was heard but a low *chip*, not distinguishable from the notes of the associated species. — ROBERT H. WOLCOTT, *Lincoln, Nebr.*
