

Classification of the Anseres,' pp. 249-344, text figures 1-42, plates 1, 2; (4) 'Osteology of *Coccytes glandarius*: A Comparative Study of New and Old World Coccyges,' pp. 345-357, text figures, 1, 2. This is followed by a Bibliography of the author's writings that bear directly upon the Anatomy and Classification of Birds' (pp. 357-367), and the Index (pp. 369-381).

From the author's preface (dated "Washington, D. C., January 31, 1901") this work appears to be based on his numerous previous papers on the osteology and classification of birds, which are presented in new form, "thoroughly revised, amplified and improved," with, for the most part, "new illustrations." The author's long series of contributions to avian osteology are thus brought together in convenient form, and represent his latest views on the relationships of the groups here treated. Its publication as a 'Bulletin' of the New York State Museum has already been explained by the author in another connection (*Auk*, XXVI, April, 1907, p. 217).—
