

of text by Mr. Brook describing the habits of the birds and his experiences in photographing them. The whole forms an attractive and interesting contribution to the life history of this hawk, likely to lead others into the field of bird photography and the study of the living birds in which the author seems to be an adept.—W. S.

**The Nebraska Waterfowl and their Food.**<sup>2</sup>—This contribution from the Biological Survey consists of two parts, 'Waterfowl in Nebraska, by Dr. Harry C. Oberholser and 'Wild Duck Foods of the Sandhill Region of Nebraska' by W. L. McAtee.

The sandhill region of Nebraska, containing as it does innumerable small lakes and marshes is a natural resort of various species of waterfowl and the object of the present publication is to place those who may be interested in the conservation of these birds, data on their relative abundance and habits and the methods by which this region may be made more attractive for them. Dr. Oberholser visited most of the lakes and obtained a wealth of information regarding the birds which inhabit them as well as data on past and present conditions there. He has given lists of the species found on the more important lakes and an annotated list of all of the species observed, their habits, relative abundance, etc., together with warnings as to the dangers attending the draining of the lakes in the consequent extermination of the wildfowl.

Mr. McAtee has reported upon collections of the marsh vegetation gathered about a number of the lakes, pointing out the relative value of the various plants as duck food and suggesting other species which would probably thrive there if introduced.

As a whole the pamphlet, which we trust may have a wide circulation in the region of which it treats, gives to the sportsmen of Nebraska all of the data required in any effort that they may be inclined to make for the conservation of this natural breeding ground for the ducks. And in view of the rapid destruction of the former breeding grounds farther north, it is none too soon to take every opportunity to save all such regions as this, which still remain in the United States, from thoughtless destruction. It would be a fine thing if the Legislature of Nebraska would make this lake region a permanent State preserve for the breeding of waterfowl, which could apparently easily be done without any inconvenience to the grazing or farming interests as it is not suitable for either.—W. S.
