

Junco oreganus montanus in Oregon.—It is rather strange that the Montana Junco (*Junco oreganus montanus*) has not hitherto been recorded from Oregon. It appears to be a fairly common bird both in summer and during the migrations in the eastern part of the State. The following Oregon specimens are in the Biological Survey collection of the United States National Museum:

259673 ♀	Barren Valley, altitude 3950 feet, near Cord	Oct. 11, 1916,	H. H. Sheldon
242986 ♂	Bend	April 15, 1915,	G. G. Cantwell
242260 ♀	Millers, mouth of Deschutes River	April 10, 1915,	S. G. Jewett
259668 ♀	Homestead, altitude 3500 feet	June 7, 1916,	H. H. Sheldon
259667 ♂	Homestead, altitude 3500 feet	June 7, 1916,	H. H. Sheldon
259670 ♀	Homestead, altitude 3500 feet	June 9, 1916,	H. H. Sheldon
258307 ♀	East Pine Creek, 2½ miles northeast of Cornucopia	Sept. 1, 1915,	M. E. Peck
258305 ♀	East Pine Creek, 2½ miles northeast of Cornucopia	Sept. 1, 1915,	M. E. Peck
242271 ♀	Beech Creek	July 2, 1915,	S. G. Jewett

—HARRY C. OBERHOLSER, *Washington, D. C.*

Evening Grosbeak at Ellenville, N. Y.—On the morning of April 19, 1922, as I was wandering through an open patch near to a small wooded tract, a good sized bird flew past me and lit in a nearby birch tree. Its large beak and striking markings convinced me, at once, that it was an Evening Grosbeak. It allowed me to approach to within about five feet of the tree and showed no signs of fear. I watched it for about five minutes during which time it scarcely moved and then it flew and alighted on the ground about twenty feet away. As I approached it again flew and lit in a second tree and this time paid no attention to my careful observation from all sides. It was a full plumaged male bird. Soon my attention was distracted by what sounded like a number of English Sparrows and turning I saw that it was a whole flock of these Grosbeaks, about twenty in number, with more males than females. They were feeding on sumac trees and were quite tame. When I reported the incident I was told that a flock had been observed several times this winter, the last about three weeks ago. I have been absent all winter, so was not aware of this. Although this is the first time I have ever seen the species I am positive of the identification and am reporting it because Mr. E. H. Eaton in his 'Birds of New York' gives it as rare in the State and gives no records at all for it in Ulster Co. Neither does he give any dates as late as this.—GEORGE C. ROSE, *Ellenville, N. Y.*

Evening Grosbeak at Winsted, Conn.—I think we can establish a new Connecticut record for the Evening Grosbeak. I have observed
