

Erratum: Murray (1994)

BERTRAM G. MURRAY, JR.¹

Department of Biological Sciences, Rutgers University, Piscataway, New Jersey 08855, USA

Equation 7 on page 809 in Murray (1994) would make more sense and be easier to use if it were written:

$$s_i = \prod_0^{f-1} d_{s,r} \quad (1)$$

where $i = 1, 2, \dots, n$, s_i is the probability that any

young successfully leaves a nest of brood i , f is the day on which the first young leaves the nest, and d_s is the daily probability of survivorship of nest contents. Also, throughout the text, I confused the indices n and i . Except in equation 5, s_n , c_n , and k_n should read s_i , c_i , and k_i , respectively.
