

these ponds appear as blue as ponds of water and they undoubtedly attract water fowl.

The smaller sandpipers, when migrating, fall prey to these traps in larger numbers than all other birds collectively. This is probably due to their habit of wading along the shallow margins of ponds in search of their food. I have seen ducks descend as if to alight in oil ponds, but they never do; they must be warned in time by odor or some non-attractive appearance the pond may have. The larger waders get their feet oiled up but not the plumage.

There is no remedy for this condition and the wild life will have to suffer its continuance as it does telegraph wires, light houses and the like.—J. R. PEMBERTON, *Tulsa, Oklahoma, August 21, 1921.*

Least Tern Feeding Young on September 25.—All during the early part of September, 1921, Least Terns (*Sterna antillarum*) were still feeding young at Carpinteria, Santa Barbara County, California. On September 25, one adult was still feeding a single young bird. The adult brought small fish at intervals of about twenty minutes to a flat in a lagoon where the young bird waited. At the approach of the parent the young bird uttered the characteristic *kit-tick*, opened its mouth and spread its wings. After feeding the young bird, the parent always dipped its bill two or three times in the lagoon as it flew off. Once the parent alighted in the lagoon and bathed. The young bird joined it, and both floated and splashed a moment or two.—RALPH HOFFMANN, *Carpinteria, California, September 25, 1921.*

On the Occurrence of the Buffle-head at Eagle Lake.—The article by Mr. Dixon in the last CONDOR was read with particular interest because of the fact that we had

noted a pair of these ducks with young on the lake prior to Mr. Dixon's visit. Our party, consisting of Messrs. Jules Labarthe, Sr. and Jr., and the writer, after an extended collecting trip in northern California and southern Oregon, on our way south, encamped at the lake for a few days. May 27 (1921) was spent on a trip to the islands along the east shore of Eagle Lake. Here we found Farallon Cormorants with everything from newly built nests to those with half-grown young. The California Gulls, however, were
