

Although considerable work was done in the higher portions of the Olympic Mountains by the Biological Survey party of 1921, *Leucostictes* were noted on but three occasions. On August 3, 1921, we saw perhaps half a dozen birds on Dodwell-Rixon Pass, between the Snowfinger Glacier at the head of the Elwha River and the headwaters of the Queets River; on August 5 a flock of nine individuals was observed on the ridge between Mounts Noyes and Seattle (altitude about 5,500 feet); and on the same day I collected three immature birds on a rocky ledge above Elwha Basin at an altitude of some 5,000 feet. Two young Rosy Finches were on a steep side-hill near waterfalls and glaciers, and quite obviously belonged to a single family which had apparently been reared in the immediate vicinity.—WALTER P. TAYLOR, *U. S. Biological Survey, La Jolla, California, September 14, 1922.*

RECORD OF BIRDS BANDED

Bands: 2889-2890	12345	17168-17175	24836-24839	32887	56422-56425
2893-2894	12369	18761-18768	24840-24848	32890	56427-56429
9009-9020	12370-12371	18770	24850-24854	32892	56430-56432
9731-9732	12375	21551-21555	24856-24859	42691-42693	56434-56438
10301-10302	12377-12382	23656	24860-24865	44861	

Joseph Kittredge, Jr., at Missoula, Mont., May 26 to July 11, 1915.

<i>Actitis macularia</i> , (2)	18761,-62.	<i>Planesticus m. propinquus</i> , (6)	2889,-90, -93,-94, 21554,-55.
