ORNITHOLOGISTS—Do you know why wearing a hat may help you see birds more clearly through binoculars? Read our new article: "Getting More from Your Binocular," in the Audubon Magazine, March-April, 1957. Also, send for reprints of our earlier Audubon Magazine articles: "Know Your Binoculars"—how to choose the "right" model for your personal requirements, check it for the claims made for it, and use it to best advantage, a 12-page booklet, 10¢ (no charge to C.O.S. members); and "How to Check Alignment," free. If your binocular does not give clear and restful vision, send it to us; we clean and align to U. S. Government tolerances in one week. If you need a new binocular, send for our price list of American, German, and Japanese binoculars, 3 grades with quality comparison, including 6 models modified in our shop especially for bird study. Every glass, irrespective of price, is covered by our one-year free-service guarantee. We ship on 30 days' trial; send for details. If you have a binocular problem, let us help you solve it. We answer questions personally.—THE REICHERTS, *Mirakel Optical Co., Mount Vernon 15, N.Y.*

**BIRDS OF PINE-OAK WOODLAND IN SOUTHERN ARIZONA  
AND ADJACENT MEXICO**

By **JOE T. MARSHALL, JR.**

The Cooper Ornithological Society announces the publication of *Birds of Pine-Oak Woodland in Southern Arizona and Adjacent Mexico* as Pacific Coast Avifauna No. 32.

The monograph consists of a study of the bird life typical of the mixed pines and oaks that constitute one of the most attractive ecologic settings in the mountains of southern Arizona and northern Mexico. Through censuses and much watching of the individual responses of birds, Marshall undertakes to discover what there is about the pines and oaks that each bird seeks. He brings out the influence of the types of trees and foliage and their spacing on the abundance of different pine-oak birds and on their distributional limits north and south, and vertically.

The area reported on is one of detached mountain ranges extending from the Pinaleno and Santa Catalina mountains of Arizona south to the Sierra Madre of Sonora and Chihuahua. Most of the field work was done in the summers from 1951 to 1953. Marshall's writings about birds, while analyzing habitat selection, have a lively and attractive style which in brief compass captures the essential behavior of the species, especially with respect to foraging.

The book consists of 125 pages, and it is well illustrated by maps, charts, and photographs of habitat and by several drawings by Don R. Eckelberry, including color plates of the little known Spotted Screech Owl and of the Olive Warbler.

Pacific Coast Avifauna No. 32 is available at the following prices:
