EcoSound 1

the affordable \$79.25
parabolic microphone system

EcoSound 1 is an 18-inch transparent reflector, with electret mike, tunable highpass and bandpass filters, and high-gain amplifiers built in the handle. It has dual earphone jacks, tripod socket, pre-settable earphone level limiter, and is supplied ready-to-use with lightweight earphones, battery, 48-page application manual (including circuit diagrams).

Light weight and one-handed operation make EcoSound 1 ideal for field surveys, counts, tracking an elusive rarity, and just plain pleasurable listening.

Two output (recording) jacks are provided:

- One allows the use of the noise-rejection functions and provides extra (pre-settable) gain for impressive results using lower-cost recorders.
- The other output is low-level, direct from the first mike pre-amp to your professional calibre recorder for wide-band, archival-standard recordings.

We invite you to apply the most rigorous criteria to EcoSound 1's performance and construction (and to enjoy its low price).

Price includes UPS delivery in 48 states; CA residents add tax. Personal checks and institutional PO's welcome.

AVES BRASILEIRAS

BIRDS OF BRAZIL IDENTIFICATION GUIDE

Now it's easy to discover the name of any Brazilian bird. In this book, J.D. Frisch gives the scientific name, the popular names (in Portuguese, Spanish and English) along with the habits and more than 1,560 drawings that facilitate identification by illustrating the original colors. Printed in Italy by Mondadori, this bestseller in its field now includes an Addendum translating the major parts of the text into English.

New and recent titles from

A comprehensive and authoritative guide to African ornithology in five volumes . . .

THE BIRDS OF AFRICA

EDITED BY LESLIE H. BROWN,
EMIL K. URBAN, and KENNETH NEWMAN
ILLUSTRATED BY MARTIN WOODCOCK
and PETER HAYMAN

This five-volume set covers all species of birds found in Africa, including migrants from the Palearctic and vagrants. Resident birds are covered in full detail, with sections on their range and status, description, field characteristics, voice, general behavior, food, and breeding biology. These volumes are sure to be acclaimed as *the* authority on the avifauna of Africa for years to come. The quality of the text and the beauty of the plates will make them essential additions to the book shelves of ornithologists and birdwatchers everywhere.

Volume 1/1982, 521 pp., approx. 310 mm x 240 mm,
28 color plates, 4 black and white plates, \$99.00
ISBN: 0-12-137301-0

In two volumes . . .

ACOUSTIC COMMUNICATION IN BIRDS

EDITED BY DONALD E. KROODSMA
and EDWARD H. MILLER
TAXONOMIC EDITOR: HENRI OUELLET
*Volumes in the COMMUNICATION AND
BEHAVIOR Series*

FROM THE PREFACE: Our original intent was to compile both taxonomic and conceptual reviews [on bird sounds], but the meager knowledge of acoustic signals of many important avian taxa made the first of these impossible. Consequently, we solicited contributions from active researchers in bird acoustics, for chosen areas of evolutionary and behavioral ecology, and sought to complement them with reviews of sound recording techniques, and sound production, reception, and processing. . . . We feel . . . that these volumes will serve as a stimulating and valuable reference for students of communication and bioacoustics.

Volume 1: 1983, 360 pp., \$36.00
ISBN: 0-12-426801-3

Volume 2: 1983, 392 pp., \$39.00
ISBN: 0-12-426802-1

Set price for Volumes 1 and 2: \$64.50 (\$75.00, if purchased separately). Set prices are not valid in Australia or New Zealand.

Send payment with order and save postage and handling. Prices are in U.S. dollars and are subject to change without notice.

AVIAN BIOLOGY

VOLUME 6

EDITED BY DONALD S. FARNER,
JAMES R. KING, and KENNETH C. PARKES

Written by international experts from many disciplines, this multivolume treatise is a comprehensive survey of avian biology. The volumes thoroughly review the 8600 living species—from advances in instrumentation and technology and improved transportation facilities that permit more detailed, far-ranging field studies than ever before. Volume 6 continues the format and philosophy of the preceding five volumes and covers a broad range of topics. Three chapters consider such uniquely avian features as the glycogen body, uropygial gland, and stomach oils. Another chapter reviews and updates information on the function of the lung-air sac system. Additional chapters discuss migration systems, avian mating systems, social organization in the nonreproductive season, and the effects of domestication.

1982, 512 pp., \$65.00 ISBN: 0-12-249406-7
Subscription price: \$55.50*

*Subscription prices are valid only on purchase of all volumes ordered before publication of the last volume. Subscription prices are not valid on orders from Australia or New Zealand.

ANIMAL MIGRATION, ORIENTATION, AND NAVIGATION

EDITED BY SIDNEY A. GAUTHREAUX

*A Volume in the
PHYSIOLOGICAL ECOLOGY Series*

The aspects of animal migration treated in this volume include ecology and evolution, climatic influences, energetics, physiology, and the mechanisms of orientation, navigation, and homing. The first chapter considers migration in relation to current ecological and evolutionary theory and emphasizes the important role of migration in life history strategies. The second chapter covers the influence of long-term and short-term climatic factors in shaping the temporal and spatial patterns of dispersal and migration, while in the third, the energetics of migration, particularly the energy reserves and the energetic costs of migration, are reviewed. The fourth chapter treats the physiological mechanisms that direct preparation for, and adjustment to, migration. The final chapter emphasizes the diverse mechanisms that animals use in finding their way during migratory journeys.

1981, 400 pp., \$43.00 ISBN: 0-12-277750-6
