

## RECENT PUBLICATIONS ON WADERS

Although considerable effort is spent trying to make these lists as complete as possible, coverage is inevitably somewhat dependent on the range of journals, etc. which are available to the compilers. Therefore, details of omissions and, if possible, reprints of papers are always welcome. These should be sent to N.C. Davidson, Department of Zoology, University of Durham, South Road, Durham DH1 3LE, England. Thanks to those who have sent such information, to F.-U. Schmidt, for assistance with German literature, and to M.W. Pienkowski for help.

#### RECENT RECOVERIES OF WADERS RINGED IN BRITAIN AND IRELAND

Compiled by G.H.Green from data provided by the British Trust for Ornithology from whom permission must be sought before using the data in publications. Most of the recoveries to hand since the last Bulletin are included: some short time and distance recoveries in those species with many records are omitted as shown under the relevant species.

Symbols: age is coded according to EURING code:-

v = caught and released (i.e. 'controlled')

vv = ring number of colour marks (dye or rings) read in the field

+ = shot or killed by man

x = found dead or dying

? = manner of recovery unknown

Co-ordinates are generally only given when the locality is first mentioned.

#### Oystercatcher *Haematopus ostralegus*

Also 5 local recoveries of pulli within 40 days of ringing.
