

RECENT RECOVERIES OF WADERS RINGED IN BRITAIN AND IRELAND

Compiled by Nigel and Jacquie Clark from data provided by the British Trust for Ornithology from whom permission must be sought before using data in publications. Because of the large number of recoveries since our last list this list has to be selective. For others except Dunlin and Oystercatcher all movements of over 100km are detailed. Birds recovered over 3,000 days after ringing are detailed unless otherwise stated. All other recoveries are included in summary form. Symbols: Age is coded according to EURING code. V = caught and released (i.e. controlled), vv = ring number or colour marks (dye or rings) read in the field, + = shot or killed by man, x = found dead or dying, () = taken into captivity, ? = manner of recovery unknown. Co-ordinates are generally given only when locality is first mentioned.

Oystercatcher *Haematopus ostralegus*

As well as the recoveries listed there were 36 birds ringed on the Wash and recovered in the breeding season in Norway. For all the recoveries not listed in full the durations are as follows: less than 1,000 days 31, 1,000 - 1,999 days 18, 2,000 - 2,999 days 2, 3,000 - 3,999 days 6, 4,000 - 4,999 days 16, 5,000 - 5,999 days 6.
