

# "Breeding Waders in Europe 2000"

## The network of national co-ordinators.

In this Wader Study Group project, national co-ordinators compile information on breeding waders – primarily on population sizes and densities, and population trends. Wader workers who are aware of unpublished studies or studies published in reports or magazines of limited distribution dealing with the above subjects, are most welcome to pass the information to the national co-ordinator in question. A new up-date of European wader populations is to be published shortly, and information to be included in this up-date should be handed over immediately.
