Louisiana Birds

Dr. George H. Lowery, Jr.

Revised edition

More than half of all bird species in the United States have been found in Louisiana. This completely revised and updated edition describes the 410 species of birds found in Louisiana, including 23 discovered since the book was first published in 1953. Profusely illustrated, with 14 color plates and over a hundred photographs. More than a state bird book, *Louisiana Birds* is an engaging, intelligent guide to bird-watching as a hobby.

The Dictionary of BIRDS in Color

by **Bruce Campbell**

The most complete, useful, and beautiful international reference on birds ever to be compiled. You can study in detail the beauty of nearly every genus—more than 1000 species of birds *photographed* in their natural environments in brilliant color. Text includes authoritative descriptions of all the birds shown and gives fascinating details of habitat, migration, and mating habits. Size is 9¼ x 12. A STUDIO BOOK. 1000 color photographs; numerous black-and-white drawings.

Last Christmas, as we are doing again this year, we provided Christmas Bird Count compilers with supplies of peel-off labels, for the use of those non-subscriber participants who, paying the first-count participation fee of \$2, were to receive the Christmas Count (April, 1974) issue of *American Birds* free. Unfortunately, owing to our unavoidable delay in publication, or for other reasons, a number of labels were incorrect at the time of our mailing, and these copies were returned to us with no correct forwarding address. We would like to get these copies into the hands of the participants who should get them, but we have no way of tracing them, beyond these pages. Their names, and (incorrect) addresses are published herewith, and anyone who can provide current addresses will be gratefully appreciated.

For *American Birds* to pay not only the original out-bound postage, plus much more costly return postage, plus a second and costly re-mailing, means a substantial loss. We urge all \$2 participants this year to write complete and accurate labels *appropriate for the time of mailing*, which may be any time from late May to July, with as much as a month added in transit (atrocious but true!). All compilers please take note.

Following is the list of "blind" returns:
