

# Distribution of Canada Geese

John H. Buckalew

The following data show the distribution of Canada Geese (*Branta c. canadensis*), banded in the James Bay area of Canada: Charlton Island, N.W.T. (100); Akimiski Island (1,000); and near Seneca Falls, New York (253). Charlton Island is approximately 75 miles east of Moosonee, Ontario, Canada, and Akimiski Island is approximately 135 miles north of Moosonee. Seneca Falls is located in the Finger Lakes area of north central New York.

This is no attempt to arrive at any particular conclusion. The data are presented for the interest of those banders who do not have the opportunity to handle and band waterfowl. One interesting question arises, which I am not attempting to answer. Both Charlton Island and Akimiski Island are in James Bay and, geographically, only a short distance apart. However, all the recoveries of the Charlton Island birds were in the Atlantic Flyway, while recoveries from the Akimiski Island birds were divided — approximately 75% being in the Mississippi Flyway and 25% in the Atlantic Flyway.

Organizations directly contributing to this work are: U.S. Fish & Wildlife Service, Canadian Wildlife Service, and the Ontario Department of Lands and Forests. Individuals contributing are: Alex Hunter (at that time an employee of the Ontario Department of Lands and Forests, who accompanied me on several banding trips into the James Bay country) and Vernon E. Dewey (stationed at the Montezuma National Wildlife Refuge near Seneca Falls, New York).

Banded 1965, 1966  
Seneca Falls, NY

Provinces, Ontario, 1; and Quebec, 11. One bird, No. 508-88259, was trapped and released at the Eastern Neck National Wildlife Refuge, Rock Hall, Maryland.

Decatur, Alabama area produced 58; Albany River, Ontario, Canada, 24; Attawapiskat River, Ontario, Canada, 23; Fennville, Michigan, 19; Ansonville, North Carolina, 24; Wheeler National Wildlife Refuge, Alabama, trapped and released 15. In subsequent banding operations on Akimiski Island, 6 were trapped and released. Jack Miner Bird Sanctuary, Kingsville, Ontario, Canada, trapped and released 9. Tennessee National Wildlife Refuge trapped and released 6. One bird was trapped 3 times at the Jack Miner Refuge, and was later shot on Akimiski Island.

70½ Lake Avenue, Wolcott, NY 14590

(Ed. note: Mr. Buckalew is 65 years old and worked as a Refuge Manager under the U.S. Fish & Wildlife Service for 35 years as well as being a U.S. Game Management Agent. These activities took him from the Arctic to Florida and as far west as Wisconsin. He started banding in 1927 and is particularly interested in the colonial birds of the Del-Mar-Va Peninsula.)
