

FIG. 1. An 11-day-old cowbird in nest of Black-throated Blue Warbler. Photographed in Charlevoix County, Michigan, 1 July 1943.

**Brown-headed Cowbird fledged in nest of Black-throated Blue Warbler.**—On 1 July 1943 I found a nest of the Black-throated Blue Warbler (*Dendroica caerulescens*) at Camp Sherwood, on Walloon Lake, Charlevoix County, Michigan. This nest was at a height of 13 inches in the vertical fork of a sapling sugar maple (*Acer saccharum*) beside a path. In the nest were a Cowbird (*Molothrus ater*) about two days old, a cowbird egg, and one egg of the warbler. A total of nine observations was made through 10 July, when the cowbird fluttered away from the nest into a bush nearby, leaving the two unhatched eggs. Both male and female warblers fed the young interloper. Either one or the other or both hosts were present at all observations and permitted me to approach within 5 feet of them before taking flight. I photographed the nest and the then 11-day-old cowbird on 9 July, the day before the parasite left the nest.

Although Friedmann (1963. *U.S. Nat. Mus. Bull.*, 233:100-101) lists 10 records of Brown-headed Cowbird parasitism on this species, only one of these indicated that the hosts had raised a young parasite in the nest. Hathaway (1913. *Auk*, 30:557), the observer mentioned by Friedmann, saw a female Black-throated Blue Warbler feeding a young cowbird out of the nest near Burrillville, Rhode Island, 26 June 1910.—WALTER P. NICKELL, *Cranbrook Institute of Science, Bloomfield Hills, Michigan, 14 October 1963.*

***Tanagra trinitatis* on Tobago, West Indies.**—The small South American tanager *Tanagra trinitatis* is described by Herklots (1961. "The Birds of Trinidad and Tobago") as occurring rather rarely in Trinidad with not even sight records from the neighboring island of Tobago. We were pleasantly surprised to encounter a male bird on Tobago on 22 February 1963.

The location was near the summit of the Main Ridge of the island where the road from Roxborough across the island to Bloody Bay cuts through the rain forest. We were
