

covering birds, mammals, and other wildlife. The section on birds runs about 80 pages and has chapters on Wildfowl, Other Swimming Birds, Waders, Game Birds, Birds of Prey, Other Birds, and Oil Pollution. Topics covered in each chapter encompass possible handling hazards, approach and capture, transportation, initial care, food, force-feeding, and symptoms, diagnosis, and treatment. Appendices cover Wildlife and the Law, Euthanasia, Composition of Animal Milks, and Wildlife Rehabilitation Centers—United States.—R.J.R.

PHYSIOLOGY AND BIOCHEMISTRY OF THE DOMESTIC FOWL, VOL. 4. By B. M. Freeman (ed.). Academic Press Inc., London, England, 1983:434 pp., numerous black-and-white drawings and photographs. \$55.00.—The first three volumes of this series were published more than 10 years ago. Though they remain basic references in avian physiology they have become out of date in many areas because of the progress of research. The present volume is intended to update the original with articles by many of the original authors. The 20 chapters cover topics dealing with food intake, digestive physiology and microflora, respiration, kidney structure and urine formation, metabolism and trace elements, adrenal glands, integument, muscle, erythrocytes and haemoglobins, plasma proteins and kinins, special senses, thermoregulation, and the oviduct.—R.J.R.
