IBBA Annual Report of Birds Banded, 2011

This table represents a summary of bird banding reported from the IBBA region for 2011. This is the tenth consecutive year of this report. Thirty-nine banders reported banding 87,909 birds and 308 species/forms. Ohio banders reported 31% of banded birds with Illinois/Indiana reporting 23%, Texas 22%, and Michigan/Minnesota/Wisconsin 14%.

Ruby-throated Hummingbird was again the Number One species reported with 11,220 banded. This is both reflective of the abundance of the species and the strong interest in the banding community with this species. American Goldfinches was second again with 6662

reported. Inclusion of one game agency's dove banding placed White-winged Dove with 5489 as third and 2392 Mourning Doves as fifth. White-throated Sparrow was reported as fourth with 2959. Myrtle Warbler was sixth with 2701, Purple Martin seventh with 1801, Gray Catbird eighth with 2304, Black-chinned Hummingbird ninth with 1662, and Swainson's Thrush tenth with 1643.
